

WHAT IS CLAIMED IS:

1. A digital camera comprising:

an attacher to be attached with a recording medium forming a plurality of folders for managing a plurality of image files;

a first pointer to point at any one of said folders as a record destination folder;

a second pointer to point at any one of said folders as a reproducing destination folder;

a picture-taker to take a picture of a subject in response to a picture-taking instruction;

a storer for storing a new image file including image data of the subject to said record destination folder; and

a first changer to change a point destination of said second pointer to a point destination of said first pointer.

2. A digital camera according to claim 1, further comprising a folder No. assigner for assigning different folder Nos. respectively to said folders, wherein said first pointer holds a folder No. of said record destination folder, said second pointer holding a folder No. of said reproducing destination folder, said first changer setting a folder No. held by said first pointer to said second pointer.

3. A digital camera according to claim 1, further comprising a file No. assigner for assigning file Nos. to be possibly overlapped between said folders to said image files and a third pointer having a file No. of a file to be reproduced, wherein said image file to be reproduced is specified by said second pointer and said third pointer.

4. A digital camera according to claim 3, further comprising a second changer to change said file No. held by said third pointer to a file No. of said new image file based on the picture-taking instruction.

5. A digital camera according to claim 1, further comprising a selector for selecting an arbitrary folder as said reproducing destination folder and a third changer for changing only the pointing destination of said second pointer among said first and second pointers to a folder selected by said selector.
